Dees and Blues Repay the Faith

Finally, the Heritage Model's faith in Melbourne and Carlton has paid off. There can't be too many punters around who can claim to be in front having backed Carlton 6 times this season, but the Heritage Fund can indeed make such a boast as it now has enjoyed a 25.2% ROI from the Blues on the strength of 2 wins and 4 losses.

The Line Fund also continued its resurgence, bagging 2 from 2 this weekend, lifting its season record to 8 and 8 and its share price over the \$1.00 mark for the first time this season.

The Beta Fund, however, continues to struggle, unlucky to lose its small bet on the Swans, perhaps, but simply picking the wrong team with a sizable bet on Port Adelaide up against the Hawks (though, to be fair, Port did lead 41-14 a few minutes into the second term).

Here's the detail:

Results o	f Round 1	10 Wagers
-----------	-----------	-----------

\$2.80 \$3.00 \$3.50 ROI	Net Return* 14.9% 17.3% (6.5%) 25.8% (100.0%)	Won by 17pts Won by 10pts Lost by 60pts
\$3.00 \$3.50	17.3% (6.5%) 25.8%	Won by 10pts
\$3.50 ROI	(6.5%) 25.8%	
ROI	25.8%	Lost by 60pts
	(100.0%)	
	(100.0%)	
Drice		
Titlee	Net Return*	
\$1.28	(1.7%)	Lost by 1pt
\$1.75	(8.3%)	Lost by 34pts
	(10.1%)	
KOI	90.0%	
Price	Net Return*	
\$1.90	7.0%	Won by 32.5 pts
\$1.90	7.0%	Won by 27.5 pts
	14.0%	
	ROI Price \$1.90	ROI 90.0% Price Net Return* \$1.90 7.0% \$1.90 7.0%

On balance, you gotta be happy with that lot.

Here's where it leaves Investors:

	Overal	l Fund	Perf	ormano	e

* Recommended portfolio weightings

Now if we can just remove that nasty red colour under the 'Beta' label.

Here's a new chart, which shows how the return on the various strategies has varied round-by-round.

Round-by-Round Performance of Each Strategy

So, after all that effort, we've all come to about the same place.

And here's how the Fund-by-Fund, team-by-team view now looks:

Fund-by-Fund, Team-by-Team After Round 10

So, after this week's Saints wager, Geelong and Port Adelaide remain as the only teams that none of the Funds have wagered on so far this season.

In contrast, the most backed team is Melbourne who we've financially supported 9 times for 3 wins and 6 losses, then comes Carlton with 8 bets for 4 wins and 4 losses, and then Hawthorn with 7 bets for an impressive 5 bets and 2 losses. Indeed, Hawthorn is responsible for adding 3.7% to Strategy A Investor wealth.

Tough Going For Tipsters

Universally disappointing results for tipsters this weekend, with only CTL, MM8, MM11 and NIT faring better than chance.

Tips from all the Tipping Models (see Appendix for each Model's strategy)

(NB: I'll credit all tipsters with $\frac{1}{2}$ a point for the draw).

All of which does relatively little to change the tipster leader board, leaving MM16 one tip ahead of BKB, with Chi still another four tips back.

Cumulative Results After Round 10

Monkeys Gain Ground

Much hooting and screeching from the primate precinct this weekend as their coin-tossing ways proved more than a match for Chi and MM16.

This week I though I'd show how the M10 measure has tracked across the 10 rounds so far for Chi and for MM16:

Round-by-Round M10 Measure

So, at present, 2 monkeys tipping at random since the start of the season would have a 10% chance of matching Chi's performance; you'd need 22 to have the same chance of matching MM16's performance.

 Poor tipping all round leaves MM16 atop the table, one ahead of BKB and 5 ahead of Chi

The Alternative Premierships

Geelong remain at the head of the End of 1^{st} , 2^{nd} and 3^{rd} Quarter Premierships, winning all but the 2^{nd} quarter in their game against the Saints. West Coast remains well-placed in all these 'End of' Premierships too.

Meantime, Melbourne led for the first time this season at the main break, threequarter time and at the final siren, while Richmond also managed to pick up its first premiership points of the season, albeit only 2 in its draw with the Lions.

Melbourne, Richmond and Hawthorn are tied as the poorest-starting teams of the competition, having won only 3 of 10 first terms. Hawthorn, though, has more than compensated for this by being the 4th best team in the third quarter and the best team in the final term (they've only lost 2 final terms all season), which has been enough to win them 7 games out of 10.

It's also interesting to note that Port Adelaide have generally performed poorly in the 2^{nd} and the final terms: this week, consistent with this trend, they kicked 4.4 to the Hawks' 12.3 in these two quarters.

The Kangaroos continue to perform poorly in the final term, this week managing only 4 behinds to the Eagles' 8.4, leaving the Roos 2nd last in the During the 4th Quarter Premiership despite being 8th in the Premiership proper. At some point this season, this lack of finish is surely going to hurt them.

'Til Thursday.

Tony

Appendix

Tipping Model Strategies

Strategy Name	Basis for Tips
Chi Tipping Model (CTM)	Complex statistical model incorporating a range of factors.
Quila Tipping Model (QTM)	Uses an approach similar to that used for the CTM.
Bookies Know Best (BKB)	For each game, tips the TAB Sportsbet favourite. In the case of equal favourites, it tips the true home team or, if there's no true home team, tips the team with the higher ladder position (ties are broken using percentage then for-and-against margin).
Consult The Ladder (CTL)	Tips the team with the higher ladder position (ties are broken using percentage then for-and-against margin). For the first round of the season, use the ladder position at the end of the previous regular season.
Momentum Matters (MMx)	A series of strategies that involve building competition ladders based only on the results of the most recent x rounds of regular season games (drawing on games from the previous season if required).
	The MM2 strategy considers only the last 2 regular season rounds, the MM4 strategy only the last 4 rounds, and so on. Once a ladder has been built for a strategy, the selected team is that with the superior ladder position (as per CTL above).
	This year we'll track the performance of MM2, MM4, MM6, MM8, MM11, MM16 and MM22.
No Independent Thought (NIT)	Tips the team that is most popular amongst all other strategies.

Notional Initial Funds

For reasons that are somewhat technical (I'm happy to provide details to anyone who's interested but, broadly, it allows me to describe bets in terms of a common percentage for all Investors and still maintain the same share price for all Investors), I need to calculate what I call "Notional Initial Funds". It's calculated separately for each Fund.

For original Investors, the definition is straightforward:

Notional Initial Funds = Actual Funds Invested

For Investors who join the Fund post Round 1:

Notional Initial Funds = Actual Funds Invested / Share Price at the time of investing

(in other words, it's the notional amount that would need to have been invested at the start of the season in order to have returned an amount equal to the amount actually invested).
